

BUG404

THE BUG THEY CAN'T DELETE

Official Whitepaper - Final Edition

BNB Smart Chain | Fixed Supply: 50,000,000,000 BUG

Website: www.bug404.io

Token: 0x926daE44F65a149d7BE4530a407fCCf0fd5865C8

Presale: 0xfdBCC58cfCC12B8D18c1ead51E2c22d7605c68E2

PROJECT NOTICE: BUG404 is a community-driven project on BNB Smart Chain with a long-term vision for growth, real products, useful services and ecosystem development. Following the public launch, BUG market value will be determined by open-market conditions, including supply, demand, liquidity and overall market sentiment.

1. Executive Summary

BUG404 is a community-driven meme-token project deployed on BNB Smart Chain. Its identity combines internet error culture, cyberpunk design and a persistent mascot built around the idea of a bug that cannot be deleted.

The token has a fixed total supply of 50 billion BUG. Fifteen billion BUG, representing 30% of total supply, are allocated to a ten-stage on-chain presale. Purchases are recorded as allocations and become claimable after successful presale finalization.

BUG404 is designed with a long-term vision that extends beyond being a meme token. The project aims to build real products, useful services and a sustainable ecosystem that delivers long-term value to its community.

Following the public launch, BUG market value will be determined by open-market conditions, including supply, demand, liquidity and overall market sentiment.

2. Project Identity

BUG404 is built around a compact narrative: a system error that escaped deletion and became a recognizable internet identity.

The brand uses dark backgrounds, purple cyberpunk accents, glitch language and a distinctive mascot. Consistent visual direction supports recognition across the official website, X, Telegram and community content.

The project combines meme culture with transparent public contracts, structured token allocation and a roadmap focused on continued development.

3. Vision and Mission

Vision: establish BUG404 as a durable internet-native brand with a growing ecosystem of products, services and community experiences.

Mission: operate the presale transparently, grow an active community, publish material updates and expand BUG404 through practical development.

Principles: transparency, consistent communication, community participation, technical progress and long-term ecosystem building.

4. Network and Token Overview

Field	Value
Project	BUG404
Ticker	BUG
Network	BNB Smart Chain
Token standard	BEP-20 compatible ERC-20
Decimals	18
Fixed total supply	50,000,000,000 BUG
Presale allocation	15,000,000,000 BUG
Token contract	0x926daE44F65a149d7BE4530a407fCCf0fd5865C8
Presale contract	0xfdBCC58cfCC12B8D18c1ead51E2c22d7605c68E2
Website	www.bug404.io
Support	support@bug404.io

4.1 Fixed Supply

The official BUG token was deployed with the full supply created at deployment. The fixed-supply structure provides a clear and verifiable total token count.

Official contract addresses are published on the BUG404 website and can be independently reviewed on BscScan.

5. Tokenomics

Allocation	Share	Tokens	Purpose
Presale	30%	15.0B	Ten public presale stages
Future Liquidity	25%	12.5B	Public-market operations and ecosystem access
Marketing	15%	7.5B	Campaigns, content, partnerships and growth
Project Development	10%	5.0B	Products, services, operations and long-term development
Community	10%	5.0B	Rewards, events and ecosystem participation
Treasury	10%	5.0B	Operations, infrastructure and future development

5.1 Allocation Direction

Token allocations support the presale, future market access, community growth, project development and ongoing operations.

Material allocation updates will be communicated through official BUG404 channels.

6. Presale Structure

The presale allocation is divided into ten stages of 1.5 billion BUG each. The stage price increases progressively, creating a clear early-stage pricing structure.

Stage	BUG Allocation	Price per BUG	Stage Target
1	1,500,000,000	\$0.0003	\$450,000
2	1,500,000,000	\$0.00038	\$570,000
3	1,500,000,000	\$0.00046	\$690,000
4	1,500,000,000	\$0.00054	\$810,000
5	1,500,000,000	\$0.00062	\$930,000
6	1,500,000,000	\$0.0007	\$1,050,000
7	1,500,000,000	\$0.00078	\$1,170,000
8	1,500,000,000	\$0.00086	\$1,290,000
9	1,500,000,000	\$0.00094	\$1,410,000
10	1,500,000,000	\$0.0010866666666666667	\$1,630,000

6.1 Timing

The deployed contract encodes a start time corresponding to 13 July 2026 at 8:00 PM UAE time and an end time corresponding to 31 January 2027 at 11:59 PM UAE time.

The sale progresses through the stage allocation and closes according to the deployed contract conditions.

6.2 Payment Methods

Participants can interact with the presale using BNB or the configured BSC stablecoin.

BNB pricing uses the configured BNB/USD price-feed interface. The website displays estimates while the contract records the final on-chain allocation.

7. Buyer Experience

1. Visit the official BUG404 website and verify the published contract addresses.
2. Connect a compatible wallet on BNB Smart Chain.
3. Choose BNB or USDT and enter the payment amount.
4. Review the estimated BUG allocation.
5. Confirm the transaction in the wallet.
6. Monitor the allocation through the website and public contract data.

7. After successful finalization, use the claim function to receive BUG.

8. Contract Architecture

The BUG404 system separates the token contract from the presale contract. The token contract defines supply and transfers, while the presale contract records payments, allocations, stages and claims.

The presale uses established Solidity components for ownership, pausing, safe token transfers and reentrancy protection.

Public source verification improves transparency by allowing the community and technical reviewers to inspect the deployed code.

9. Market Launch Direction

BUG404 is intended to enter the public market after the presale and project launch process.

Following launch, BUG price movement will reflect open-market conditions, including supply, demand, available liquidity, trading activity and overall market sentiment.

Public-market milestones and liquidity updates will be announced through the official BUG404 website, X and Telegram channels.

10. Product and Ecosystem Vision

BUG404 is designed with a long-term vision that extends beyond being a meme token.

The project aims to build real products, useful services and a sustainable ecosystem that delivers long-term value to its community.

Potential directions include community tools, digital experiences, branded products, token-enabled services and partnerships aligned with the BUG404 identity.

Each product or service will be announced when its scope, development plan and release direction are ready for public communication.

11. Community and Communications

BUG404 community activity is centered on the official website, X account, Telegram channel and support email.

Community campaigns, content, events and ecosystem ideas can contribute to brand growth and future product direction.

Official announcements, technical updates and future developments will always be published through verified BUG404 channels.

12. Security and Operations

BUG404 uses public blockchain contracts and visible transaction records to support transparent operations.

Official support will never request a seed phrase, private key or wallet password.

Users should verify the domain, BNB Smart Chain network, contract address, function and amount before confirming a wallet transaction.

The project intends to continue strengthening operational controls, technical review and public documentation as the ecosystem develops.

13. Roadmap

Phase 1 - System Boot: token contract, presale contract, brand identity, domain, website, X, Telegram and support email.

Phase 2 - Presale Infection: ten-stage public presale with on-chain stage and allocation tracking.

Phase 3 - Claim Protocol: presale finalization and buyer claims through the official contract interface.

Phase 4 - Public Market Launch: market-access preparation, liquidity direction and official launch communications.

Phase 5 - Ecosystem Development: real products, useful services, community tools and partnerships.

Phase 6 - Expansion: broader community reach, ecosystem integrations and continued brand development.

14. Transparency Framework

Official token and presale addresses are displayed on the website.

Presale stage data and allocations are available from public blockchain records.

Material project updates are communicated through official channels.

Future product releases, partnerships and public-market milestones will be announced when ready.

16. Project Notice

BUG404 is a community-driven project built on BNB Smart Chain with a long-term vision for growth and ecosystem development.

Following the public launch, the market value of BUG tokens will be determined by open-market conditions, including supply, demand, liquidity and overall market sentiment.

The project aims to build real products, useful services and a sustainable ecosystem that delivers long-term value to its community.

Official announcements, technical updates and future developments will be published through the official BUG404 website and verified community channels.
